Why ride electric?

Because electric bikes are fun, healthy, cheap to run, convenient and have the lowest of emissions.

Fun

Electric bikes are fun to ride and make you feel great! Especially when you know you are riding the most convenient and sustainable transport solution there is.

Healthy & Safe

With an electric bike, you will ride more often and increase your daily exercise considerably. Research shows that even 10 mins of moderate exercise is beneficial to your health, so each ride adds up to better health.

You can ride with less exertion and inhale fewer exhaust fumes, especially when you are riding uphill in busy traffic. You can accelerate faster in traffic and when taking off, making it easier to keep up with vehicles. This can make it safer on the road as you will feel more comfortable taking up a car lane, rather than being squeezed to one side.

Cheap to run

Compared to a car, motorbike or moped, an electric bike will save you the cost of petrol, parking, registration and expensive maintenance.

In Hobart, even a small folding electric bike, the Wisper 805FE, easily makes two return trips from the city up the long steep road to Ridgeway on a single battery charge.

Low emissions

Electric bicycles are the most efficient and environmentally friendly form of assisted transport there is. One battery charge costing less than 20 cents will help you travel up to 80km depending on the terrain, your speed and the load on the bike.

For each kilometre travelled, electric bikes use less than a tenth of the energy required by a **small car** and emit less than a tenth of the greenhouse gases per passenger than an off-peak bus.

Convenient

Electric bikes are excellent for commuting to work and getting around town. They are also a great way to visit friends or local shops. The maximum speed you can travel is 30 km/hr.

Electric bikes make hills easy to climb. They get you there quicker (e.g. a 30 minute walk becomes a 5 minute bike ride). You can wear the clothes you want without sweating, so there is no need for a shower or a change of clothes when you arrive. You can park the bike outside your destination and never worry about having to find a car park or getting a parking fine.

You can carry up to 25 kg in a rear pannier or basket and up to 10 kg on a front basket.

Because of all these factors you are more likely to ride and leave the car at home, so the bike readily pays for itself.
